## 2019: Week 3

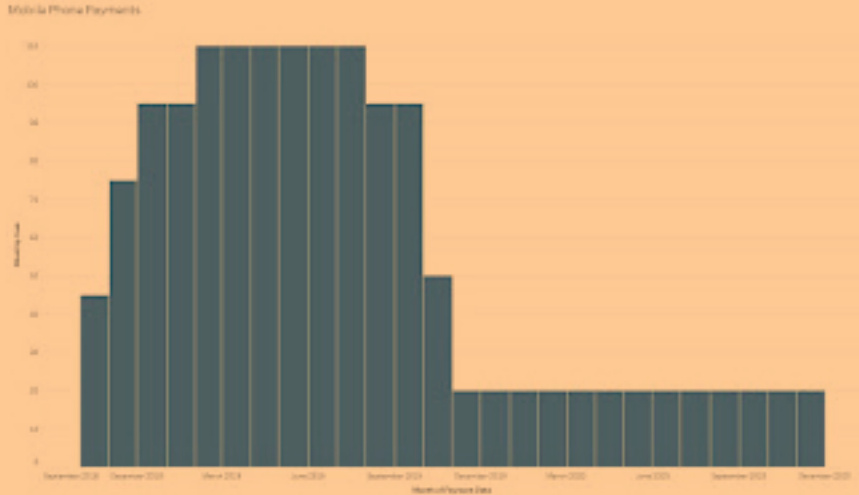

February 27, 2019

This week we are going to step up the challenge a little. If you are going to blame anyone then it's only yourselves for doing such a great job so far on solving our challenges!

This week's inspiration comes from [Bethany Lyons, a Tableau Product Manager](#). Bethany's sessions at the conference are phenomenal each year and always tackle some pretty chunky issues. Her session at the Tableau Conference in 2017 was on how to handle data on subscriptions. If you've never come across this challenge (lucky you) then you are about to experience why this is an issue.

Scenario:

You work for a mobile / cell phone company. You boss asks you to pull together the revenue report of your current batch of contracts (sadly there are only four contracts!). They need to know how much revenue is generated each month from these contracts whilst they are 'live' (ie from their start date until 'x' months in the future when the contract runs out).

The aim of the week is to be able to create a chart like this but with all the data prep work done in Tableau Prep Builder. If you think that is simple - here's the input data:

| Name     | Monthly Cost | Contract Length (months) | Start Date |
|----------|--------------|--------------------------|------------|
| Carl     | 20           | 24                       | 13/12/2018 |
| Jonathan | 15           | 6                        | 22/02/2019 |
| Andy     | 45           | 12                       | 17/10/2018 |
| Sophie   | 30           | 12                       | 19/11/2018 |

Requirements for this week:

- [Import the file](#)
- Make sure you use both sheets
- Use one sheet to help you create a row of data for each month the person's contract is 'live' for
- Remove unnecessary fields of data
- Output for use within Tableau Desktop
- [Recreate the viz](#)

| Payment Date | Name     | Monthly Cost | Contract Length (months) | Start Date |
|--------------|----------|--------------|--------------------------|------------|
| 19/11/2018   | Sophie   | 30           | 12                       | 19/11/2018 |
| 17/10/2018   | Andy     | 45           | 12                       | 17/10/2018 |
| 22/02/2019   | Jonathan | 15           | 6                        | 22/02/2019 |
| 13/12/2018   | Carl     | 20           | 24                       | 13/12/2018 |
| 19/12/2018   | Sophie   | 30           | 12                       | 19/11/2018 |
| 17/11/2018   | Andy     | 45           | 12                       | 17/10/2018 |
| 22/03/2019   | Jonathan | 15           | 6                        | 22/02/2019 |
| 11/01/2019   | Carl     | 20           | 24                       | 13/12/2018 |

Your output file should:

- Have five columns
- Have fifty-five rows of data (including the headers)
- Be at the person, per month level of detail
- Have no cells without a value
- Save as a .tde or .hyper file (csv if you are not going to build the view in Tableau Desktop)

For comparison, here's [our output file](#). Don't to forget to fill in our [participation tracker](#)!

### 2021: Week 22 - Answer Smash

June 02, 2021

Challenge By: Jenny Martin Recently, my family and I have become quite invested in the TV quiz show Richard Osman's House of Games . The final round is always a round called Answer Smash. In this round you have a picture and question and you have to "smash" the name of the picture with the answer ...

### How to...Handle Free Text

January 24, 2020

| Text                            | Count |
|---------------------------------|-------|
| Called about policy W4200...    | 1     |
| Called about their policy W4... | 1     |
| Called complaining. Need to...  | 1     |
| Called regarding policy W420... | 1     |

Free isn't always a good thing. In data, Free text is the example to state when proving that statements correct. However, lots of benefit can be gained from understanding data that has been entered in Free Text fields. What do we mean by Free Text? Free Text is the string based data that comes from allowi ...
